The Net Asset Value of our funds is published and updated on a regular basis on our web page www.cmb.mc

Description

The fund invests in bonds with an international diversification. The fund manager may also invest part of the portfolio in convertible bonds, in money market instruments or keep a part in liquidity depending on market conditions. Investments are focused on the Euro.

Investment objective

The fund is suitable for clients looking to build an exposure to international bonds denominated in Euro. It is a financial instrument in which the client may invest part of his assets, with a recommended investment horizon of at least 2 to 3 years. The objective is to generate capital gains in the medium run. In the case where an investment for a shorter time horizon is considered, the client should be informed about the levels of volatility and risk inherent to bond markets in the short run.

Management style

The fund is managed actively.

The first step in the creation of the portfolio consists in an investment strategy which is split between an analysis of economic conditions and a detailed analysis of markets and yield curves.

The conclusion of these analyses is shaping the outlook for interest rates. According to the circumstances, the fund manager seeks to position the portfolio to take advantage of the shape of the yield curve. In the case of an expected decrease in long-term rates, investments in bonds with longer-term maturities are privileged. Inversely, in the case of an expected increase in long-term rates, the fund focuses on bonds with shorter maturities.

The fund returns are coming from coupon payments on the one hand and from possible capital gains on the other hand which the fund may generate in an environment of falling interest rates.

The fund is taking advantage of the cooperation with well-known financial intermediaries and institutions, to access top information in order to elaborate economic and market analysis and to select the corporate issues, included in the portfolio.

The degree of risk of the overall portfolio is controlled on a regular basis, in order to assure the right positioning in regard to the evolution of the yield curve.

Investment universe

The major part of the portfolio will be invested in government bonds of the Euro Zone or other governments or supranational issues, denominated in Euro.

A small part of the portfolio may be invested in corporate issues, denominated in Euro, depending on the yield pick-up linked to the issuer.

A diversification can be considered in government or supranational bonds, denominated in currencies which have a strong correlation with the European currency, like the Swedish, Norwegian or Danish currencies.

Investments are concentrated in bonds with an AAA rating. The minimum rating accepted in the fund is BBB.

MONACO EXPANSION EURO Monthly report

Net Asset Value as of June 30th, 2010: 4,972.25 €
 Monthly Performance: -0.7 %

Performance

Historic performance

Trailing 12 months performance (basis 100)

Past performance does not guarantee future performance. 2010 performance data is not audited.

Market strategy

In June, financial markets remained jittery. Austerity budget plans and fiscal consolidation measures announced by various countries, particularly in Europe, did cast a shadow on the sustainability of the ongoing recovery, while the Greek crisis and its effects on other countries in the euro zone (notably Spain, Portugal and Italy) remained at the centre of investors' concerns. Stock markets fell sharply at the end of June and investor risk aversion remained high, in line with the implied volatility index of the S&P 500 index, which stayed at over 30%. At the macro-economic level, business indicators trended upward, but weakened at the end of the month. In the first quarter of 2010, GDP growth in the United States thus stood at +2.7%, lower than the expected +3.0% figure.

In terms of monetary policy, at its meeting of 10 June, the ECB maintained its target rate at 1%, as anticipated. Target rates are forecast to remain stable over the coming quarters. In this context of flight to quality, interest rates fell over the period. Indeed, 5-year Bund yields in the euro zone fell by 10 bp to a historically low 1.46% on 30/06. The 2/10 Euro swap rate differential fell to 152 bp at the end of the month, a drop of 8 bp.

In this context, credit spreads narrowed very slightly during the month. The average spread over government bonds of the Merrill Lynch Corporate Euro index declined by 4 bp to 201 bp on 30/06. Spreads of financial issuers remained stable at 255 bp and spreads of industrial issuers dropped by 10 bp to 142 bp, at end-June.

Credit diversification had a neutral effect on portfolio performance over the month. The positioning of the fund towards a flattening of the curve was positive in terms of its impact on performance. Investments in inflation-indexed bonds under-performed traditional bonds. Throughout the whole period under consideration, the portfolio's modified duration was maintained at a fairly low level, ranging between 1.60% and 1.65%. The portfolio's modified duration stood at 1.61% on 30 June 2010.
