INVESTMENT UNIVERSE AND PHILOSOPHY

The fund **GLOBAL LUX DETTE EMERGENTE (EUR)** is a feeder fund that invests mainly in the fund Neuberger Berman Emerging Market Debt Blend Fund (the master fund). The master fund invests in sovereign and private issuer bonds issued in emerging market countries and denominated either in hard currency or in local currency. The investments denominated in hard currency refer to investments in USD, EUR, GBP, YEN and CHF. The average rating is "Investment Grade". The target allocation for emerging market bonds is 50% sovereign bonds, 25% private issuer bonds in hard currency and 25% sovereign bonds in hard currency. The fund is hedged against the US dollar.

The management is discretionary with a selection process that starts from a macroeconomic analysis and finishes with the stock choices ("Bottom-up"). The fund is diversified across strategies and geographies as well as in terms of the number of positions.

RISK PROFILE

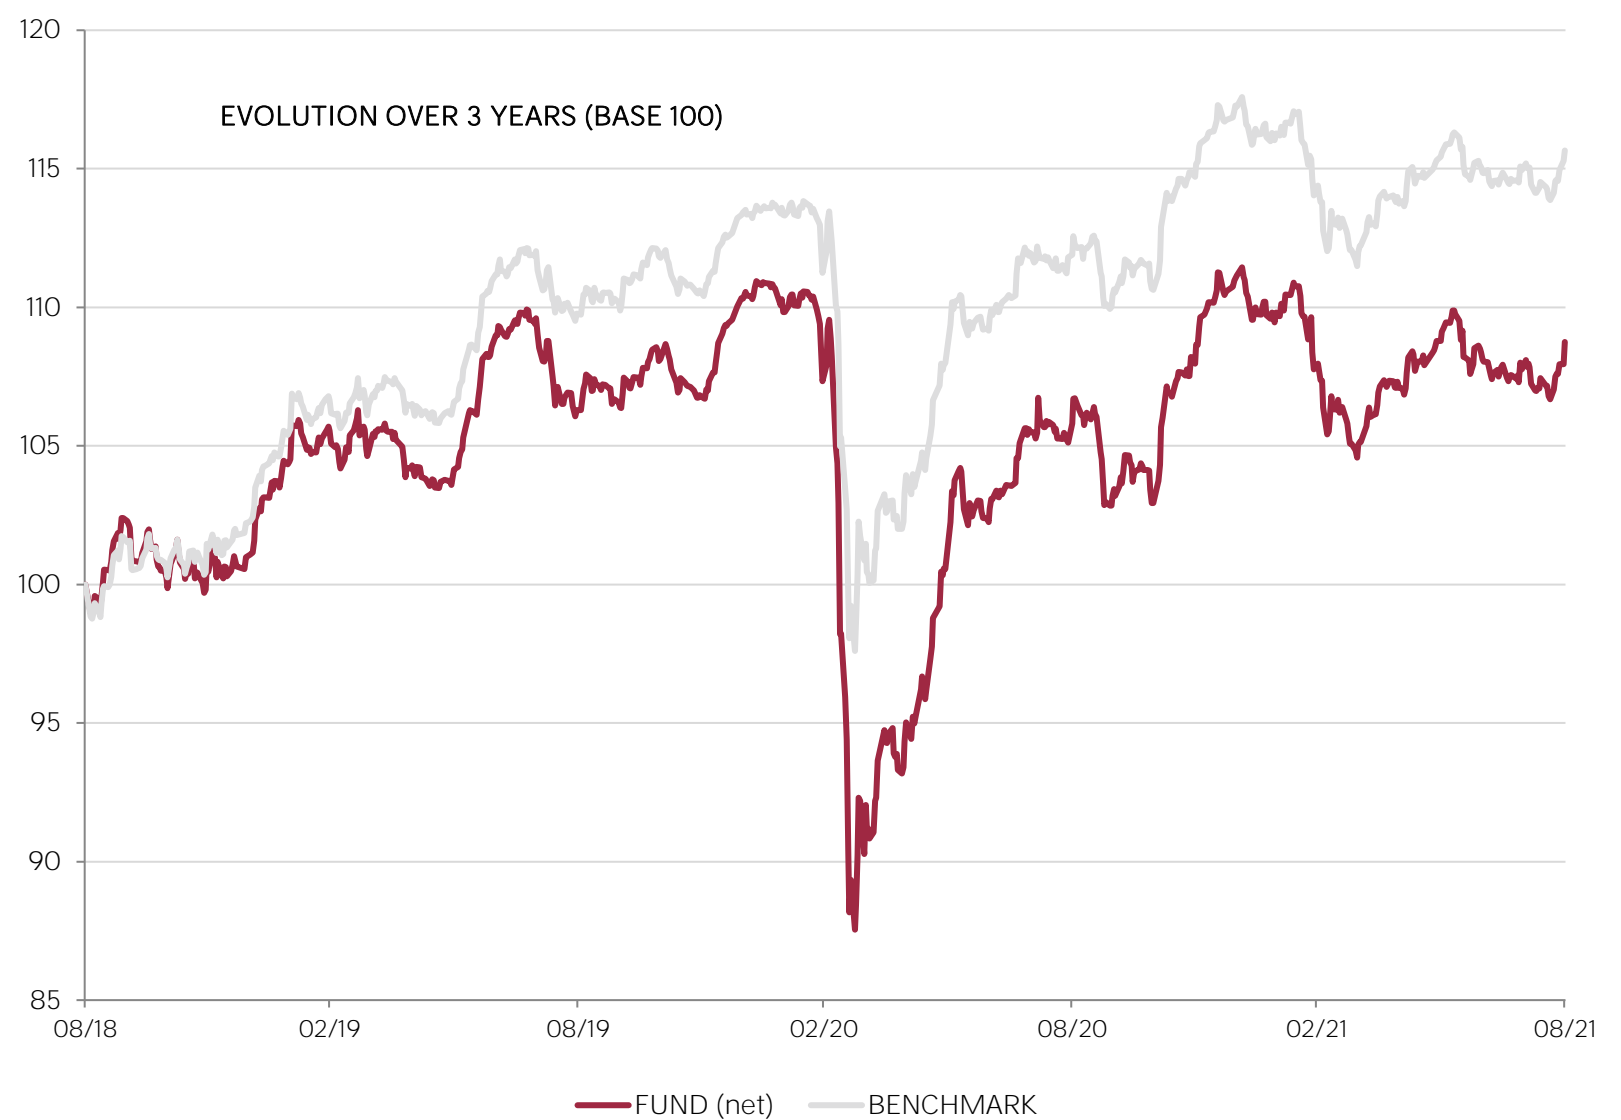

Lower risk/potential reward

Higher risk/potential reward

The risk indicator, based on past volatility, cannot cover all types of risks to which the fund may be exposed. It is possible that the past data used does not constitute a reliable indication of the future risk profile. The category associated with this fund is not a guarantee and can evolve with time. The lowest category is not synonymous with a "riskless" investment.

PERFORMANCE

Past performance is not a guarantee of future performance, nor is it constant with time and does not constitute in any case a guarantee of future performance.

MANAGEMENT COMMENT

In August, the various segments of the bond market were up, both for emerging market debt denominated in local currency (+0.78%) and for debt issued in USD (+0.91% for government bonds and +0.4% for corporate bonds).

Global growth remains strong but slower, especially in China, and the latest macroeconomic figures show no further acceleration. In this environment of resumption of activity, central banks are talking about normalizing their monetary policy. The Fed is expected to cut back on purchases by the end of the year, while the ECB is expected to announce similar measures soon. However, even if rates should logically continue to rise, the latter should remain contained due to slower growth and inflation seen as temporary. Lagging Japanese stocks should benefit from this economic recovery, but also the slightly better epidemic side, while Chinese stocks appear to have bottomed out after recent political statements.

Perfect scenario for the pursuit of risky assets: strong global growth without acceleration in a low interest rate environment. The buying flows initiated by the lack of alternatives should continue in equities and credit bonds. It will always be necessary to monitor both the evolution of the pandemic and inflation, which will be a source of concern for the "Goldilock" scenario.
