RISK PROFILE

Lower risk/potential reward

The risk indicator, based on past volatility, cannot cover all types of risks to which the fund may be exposed. It is possible that the past data used does not constitute a reliable indication of the future risk profile. The category associated with this fund is not a guarantee and can evolve with time. The lowest category is not synonymous with a "riskless" investment.

PERFORMANCE

Past performance is not a guarantee of future performance, nor is it constant with time and does not constitute in any case a guarantee of future performance.

Investment grade risk premiums have continued to tighten. Overall, premiums are very stable and have been fluctuating in a range of 50bps to 60bps for several months. Rates have evolved in two phases, first rising steadily to - 0.09% (German 10-year), before falling back to -0.17%, close to the level of the end of September (-0.20%).

Central bankers (Fed, BOE, ECB) confirm from their indicators that the period of high inflation will be longer than expected. Fears about inflation and a slowdown in growth in 2022 remain. The rise in energy prices is also reflected in agricultural commodities.

Corporate earnings have been good overall but forecasts are cautious. Primary market activity has slowed and is expected to resume its pace in November.
