MANAGEMENT COMMENT

The US 2-year sovereign rate reached +3%. The neutral rate of 2.5% was even largely exceeded in the middle of the month to reach 3.45%. The market subsequently retreated in the face of fears of an economic slowdown. The speeches of central bankers are focused on the need to stabilize prices and that an economic slowdown is likely. The goal is to calm down the overheating economy. On the credit side, premiums continue to diverge by incorporating the risk of a recession. The strategy is to maintain a low duration while the FED implements its monetary policy. The average life of the fund is low, close to 9 months.
