Published in the "Journal de Monaco" and displayed at CMB Monaco headquarters and in CMB Monaco branches. Our funds' net asset values are regularly published and updated on the website www.cmb.mc

INVESTMENT UNIVERSE AND PHILOSOPHY

The fund **GLOBAL LUX DETTE EMERGENTE (EUR)** is a feeder fund that invests mainly in the fund Neuberger Berman Emerging Market Debt Blend Fund (the master fund). The master fund invests in sovereign and private issuer bonds issued in emerging market countries and denominated either in hard currency or in local currency. The investments denominated in hard currency refer to investments in USD, EUR, GBP, YEN and CHF. The average rating is "Investment Grade". The target allocation for emerging market bonds is 50% sovereign bonds, 25% private issuer bonds in hard currency and 25% sovereign bonds in hard currency. The fund is hedged against the US dollar.

The management is discretionary with a selection process that starts from a macroeconomic analysis and finishes with the stock choices ("Bottom-up"). The fund is diversified across strategies and geographies as well as in terms of the number of positions.

RISK PROFILE

The risk indicator, based on past volatility, cannot cover all types of risks to which the fund may be exposed. It is possible that the past data used does not constitute a reliable indication of the future risk profile. The category associated with this fund is not a guarantee and can evolve with time. The lowest category is not synonymous with a "riskless" investment.

PERFORMANCE

Past performance is not a guarantee of future performance, nor is it constant with time and does not constitute in any case a guarantee of future performance.

SUSTAINABILITY RATING

MORNINGSTAR®

The rating is expressed as 1 to 5 “globes,” whereby a higher number of globes indicates that the portfolio has lower ESG Risk. The number of globes a fund receives is determined relative to other funds in the same Morningstar Global Category.

MANAGEMENT COMMENT

In August, market indices on emerging debt experienced positive performances in local currency (+0.3% JP Morgan GBI) while, with regard to debt issued in USD, the indices are down for government bonds (-1.2% JP Morgan EMBI) and close to balance for Corporate bonds (Ishares JP Morgan EM Corporate).

The world economy is revised downwards, with developed countries (Europe and the United States in the lead) who fear a recession due to inflation, which would affect consumption and the rise in interest rates to combat it that is recessive by nature; Fed or ECB rate adjustments are not stabilized, as the inflection point on inflation is still uncertain. Asia is less affected by the price increase, however China is penalized by sluggish consumption (mainly due to Covid), but also by the crisis in its real estate sector.

The adjustment of monetary policies in developed countries to curb inflation creates uncertainty in the markets. As the Fed has pointed out, the rate hike will be tied to macro data. The latter will be heterogeneous, but in view of the declines in the price of raw materials and energy, and the reduction in bottlenecks, they will eventually lead to a drop in the rate of inflation: which will then be favorable to risky assets, including Asia and emerging markets. Let's hope that until then growth will remain in the positive zone as it is today.
