INVESTMENT UNIVERSE AND PHILOSOPHY

The fund MONACO PATRIMOINE SECURITE USD invests mainly in equity, bond and alternative funds with an equity exposition between 15% and 35% of the total fund.

The management is discretionary and prioritises asset class allocation with a strong diversification across sectors and geographies as well as in terms of the number of positions.

RISK PROFILE

Lower risk/potential reward

Higher risk/potential reward

The risk indicator increased from 3 to 4 (End of May 2022)

The risk indicator, based on past volatility, cannot cover all types of risks to which the fund may be exposed. It is possible that the past data used does not constitute a reliable indication of the future risk profile. The category associated with this fund is not a guarantee and can evolve with time. The lowest category is not synonymous with a "riskless" investment.

PERFORMANCE

Past performance is not a guarantee of future performance, nor is it constant with time and does not constitute in any case a guarantee of future performance.

SUSTAINABILITY RATING

MORNINGSTAR®

The rating is expressed as 1 to 5 “globes,” whereby a higher number of globes indicates that the portfolio has lower ESG Risk. The number of globes a fund receives is determined relative to other funds in the same Morningstar Global Category.

MANAGEMENT COMMENT

Equity markets end in scattered order in August. In the U.S., the Nasdaq lost -4.6% and the S&P 500 -4.2%. Japanese and emerging equities gained +1.0% for the Nikkei 225 and 0.03% for the MSCI Emerging) and Europe (Eurostoxx 50) was down -5.1%, like China -2.2% (CSI 300). On the Rates side, the risk premiums of the Investment Grade category are up from 80bp to 92bp (5-year CDX). Finally, risk-free rates are up sharply (the 10-year U.S. rose from 2.65% to 3.19%).

The world economy is revised downwards, with developed countries (Europe and the United States in the lead) who fear a recession due to inflation, which would affect consumption and the rise in interest rates to combat it that is recessive by nature; Fed or ECB rate adjustments are not stabilized, as the inflection point on inflation is still uncertain. Asia is less affected by the price increase, however China is penalized by sluggish consumption (mainly due to Covid), but also by the crisis in its real estate sector.

The adjustment of monetary policies in developed countries to curb inflation creates uncertainty in the markets. As the Fed has pointed out, the rate hike will be tied to macro data. The latter will be heterogeneous, but in view of the declines in the price of raw materials and energy, and the reduction in bottlenecks, they will eventually lead to a drop in the rate of inflation: which will then be favorable to risky assets, including Asia and emerging markets. Let's hope that until then growth will remain in the positive zone as it is today.
