Manager Comments

Credit spreads tightened in June, falling from 87bp to 81bp. Interest rates ended the month slightly higher (+11bp), with the German 10-year rate at 2.61%. The ECB opened the June meeting by cutting its key rate by 25bp to 2%, its eighth cut in 12 months. The decision was prompted by slowing inflation and growing economic pressures from tariffs. Attention was also focused on geopolitical risk. After a tense period during which the United States was drawn into the conflict between Iran and Israel, the climate improved with the announcement of a ceasefire negotiated by the United States after 12 days of fighting. NATO member states approved a new defence spending target of 5% of GDP. Germany accelerated its stimulus plan, which had an impact on the business climate (IFO at its highest for a year), but the impact will also be on the volume of new bond issues. Technical factors in the credit market remained very strong over the month, underpinning performance. In terms of portfolio activity, we took profits on a structured product linked to the yield curve slope. We participated in several new issues (Malakoff Humanis, Altrad, CNP Assurances and Klesia Prévoyance).

ESG risk: Although the portfolio manager intends to implement the ESG investment process as described in the Mediobanca Group sustainability policy (<https://www.mediobanca.com/en/sustainability/esg-and-the-focus-on-consumers/esg-in-our-group.html>) and on the CMB Monaco website (<https://www.cmb.mc/sites/default/files/2022-05/CMG%20MONACO%20ESG%20POLICY.pdf>), the success of the ESG strategy largely depends on third-party data providers as well as their methodologies and IT systems. These data are not systematically tested or verified by the manager. Consequently, the manager may invest in or divest from a security based on information provided by a third party that may later prove to be inconsistent with the fund's criteria. This could occur when the provider considers additional information that causes the investment to no longer meet the investment criteria. Moreover, multiple providers may be used; however, different providers may present differences, discrepancies, or inconsistencies regarding information related to certain companies. Therefore, in some cases, an internal assessment is conducted to evaluate the company's involvement in a certain activity or controversy. In these cases, the manager does not guarantee that the internal evaluations meet investors' expectations regarding investment or divestment according to the ESG investment process.

\* The risk indicator, based on past volatility, cannot cover all types of risks to which the fund may be exposed. It is possible that the past data used does not constitute a reliable indication of the future risk profile. The category associated with this fund is not a guarantee and can evolve with time. The lowest category is not synonymous with a “riskless” investment.

\*\* The rating is expressed as 1 to 5 “globes,” whereby a higher number of globes indicates that the portfolio has lower ESG Risk. The number of globes a fund receives is determined relative to other funds in the same Morningstar Global Category.
